

TEST REPORT

TEST OF A NON-CATALYTIC WOOD BURNING STOVE FOR EMISSIONS AND EFFICIENCY

PER EPA METHODS ALT-125, ASTM E2515, ASTM E3053 and CSA B415.1,

Client:

**Foyers Suprême**

3594 Rue Jarry E,  
Montréal,  
QC H1Z 2G4

Model Name: 32IN

Attention: Rafael Sanchez

TESTED BY:

Services Polytests inc.  
695-B Gaudette  
St-jean-sur-Richelieu, QC, J3B 7S7

TEST DATES: June 25<sup>th</sup> and 27<sup>th</sup> 2019

REPORT DATE: July 9<sup>th</sup> 2019

Project number: PI-20201

All services undertaken are subject to the following general policy: Reports are submitted for exclusive use of the clients to whom they are addressed. Their significance is subject to the adequacy and representative character of the samples and to the comprehensiveness of the tests, examinations or surveys made. This document may not be reproduced except in its entirety without the written permission from Services Polytests. Services Polytests have not been involved in any R&D design consulting regarding this unit as requested by the NSPS..

Tested:

A handwritten signature in black ink, appearing to read "Maxime Martin".

## 1 INTRODUCTION

### 1.1 GENERAL

#### Laboratory

- Location: Services Polytests Inc., 695-B Gaudette St-jean-sur-Richelieu QC, Canada J3B 7S7
- Elevation: 100 feet above sea level

#### Test program

- Purpose: unit qualification NSPS 2020 cord wood
- Test dates: June 25<sup>th</sup> and 27<sup>th</sup> 2019
- Test methods used:
  - Particulate emissions: ASTM E3053-17 ; ASTM E2515-11 methods ALT-125 as referred into 40 CFR Part 60 Subpart AAA
  - Efficiency: CSA B415.1-10

### 1.2 TEST UNIT INFORMATION

#### General

- Manufacturer: Foyer Supreme
- Product type: wood heater,
- Combustion system: non-catalytic
- Unit tested: 32IN

#### Particularities

The engine will have the model number of 32IN, which comprises the standard components related to the combustion of the unit (such as the firebox, the controls, and the baffle system). The engine will however have an optional firebox lining; either with soapstone (model name: **Lumis 32 – Soapstone, Regal 32 – Soapstone, Flair 34**) or cast iron (model name: **Lumis 32 - Cast Iron, Regal 32 – Cast Iron**). The 32IN models are insert fireplaces with aesthetic differences.

#### In Summary:

- **Lumis 32 - Soapstone**: Insert fireplace with a rectangular door/façade and a soapstone firebox lining.
- **Regal 32 - Soapstone**: Insert fireplace with an arched door/façade and a soapstone firebox lining.
- **Lumis 32 – Cast Iron**: Insert fireplace with a rectangular door/façade and a cast iron firebox lining.
- **Regal 32 – Cast Iron**: Insert fireplace with an arched door/façade and a cast iron firebox lining.
- **Flair 34**: Insert fireplace with an optional door/façade (arched or rectangular) and a soapstone firebox lining.

### 1.3 RESULTS

Emission results obtained

- Weighted Average Emissions Rate: 1.59 g/hr
- Weighted Average Overall Efficiency: 66.07 %

Conformity: NSPS Phase 2020, cord wood test method ALT-125

### 1.4 PRETEST INFORMATION

Unit condition: The unit was received by carrier during May 2019 in good condition. The 50hrs of aging was done by Polytests as screening tests.

Set up

- Venting system type: 6 inches diameter inch steel pipe and insulated chimney
- System height from floor: 15 feet
- Particularities: this unit as been tested with the optional fan for high, medium and low burn rate.

## 2 SUMMARY OF TEST RESULTS

### 2.1 MODEL IDENTIFICATION

Model name number	32 IN
Manufacturer	<b>Foyers Suprême</b>
address	3594 Rue Jarry E, Montréal, QC H1Z 2G4
appliance category	INSERT
Usable Firebox Volume – ft3	2,98
Catalytic/Non-Cat	Non-Cat
convection air fan (no, standard, Optional)	OPTION

### 2.2 LABORATORY INFORMATION

Testing laboratory	Polytests Services
address	695-B Gaudette, St-jean-sur-richelieu
ISO/ Accreditation info	17025
Dates tested	June 25 <sup>th</sup> and 27 <sup>th</sup> 2019
Test Methods / Standard	ALT-125
Dilution Tunnel Inside diameter – in	8
Filter diameter	47
Filter material	PTFE Pall

### 2.3 TEST CONDITION SUMMARY

## 2.8 DILUTION TUNNEL FLOW RATE MEASUREMENTS AND SAMPLING DATA (ASTM E2515)

Average dilution tunnel measurements				Sample Data			
Run Number/ test category	Burn Rate (Min)	Volumetric Flow Rate (dscf/min)	Total Temperatures (°R)	Volume sampled (DSCF)		Particulate catch (mg)	
				1	2	1	2
1.1	176	341,34	579,91	33,170	32,281	5,90	6,10
1.2	515	353,97	562,84	96,260	93,299	5,20	4,80
2.1	214	337,56	582,54	40,469	39,207	4,60	4,60
2.2	472	348,69	572,70	86,766	83,446	5,90	5,50

## 2.9 DILUTION TUNNEL DUAL TRAIN PRECISION

Run Number/ test category	Sample Ratio		Total Emission (g)		
	Train 1	Train 2	Train 1	Train 2	% Deviation
1.1	1811,18	1861,02	10,69	11,35	3,02%
1.2	1893,78	1953,89	9,70	9,23	2,48%
2.1	1785,04	1842,49	8,07	8,34	1,61%
2.2	1896,84	1972,31	10,88	10,54	1,60%

### 3 PROCESS DESCRIPTION

#### 3.1 DISCUSSION

The wood heater has been received in a good shape by a carrier in May 2019. A few screening tests have been done to ensure the repeatability of the results. Maximum burn rate has been done on June 25<sup>th</sup> 2019 followed by a low burn rate. On June 27<sup>th</sup> 2019 a second maximum was done followed by the medium burn rate.

#### 3.2 UNIT DIMENSIONS

##### Baffle

- Location: between top of combustion chamber and hearth
- Dimensions: covers the hearth area minus the restriction at front
- Material: Stainless steel baffle

##### Bricks

- Cast Iron brick 1 ¼ inch. Thick cover all back and sides and bottom

##### Flue gas exhaust

- Location: Top
- Dimensions: 6 in. diameter
- Material: Steel

##### Gasket

The door of the unit consists of three sections of gaskets, where 2 of them are holding the glass (SGI-260-0230) and 1 is sealing around the door onto the firebox (SGI-265-0125). Please refer to page 46 of 32IN\_Tech\_DRAW.pdf for information on dimensions, materials, and assembly details. Technical specification of the SGI-260-0230 and the SGI-265-0125 can be found in the DATA – Knitted Fiberglass Rope.pdf document

##### Overall unit dimension

- Firebox dimensions: 16.5 to 23 in wide x 15.5 in. deep x 16.75 in. high
- Usable volume: 2.98 cuft.
- Overall heater dimension: 33-inch-wide 20 inch deep 24 inch high

##### Convection fan

- Optional convection tangential fan (Ebm-Papst, part num. RG 125-19/06) supplied with unit see appendix 6 for all detail

##### Catalyst

- None

### Description

The wood heater is equipped with a bi-metallic variable burn rate controller. The side walls of the combustion chamber are lined with either cast iron panels or soapstone slabs, allowing for a longer burn at a more uniform heat output. In addition, the casing of the combustion chamber is constructed out of stainless steel, allowing for a quick heat transfer. For the purpose of increasing the efficiency, a blower can be installed into the unit.

### Bi-metallic combustion air control

#### **PRIMARY AIR CONTROL**

The Primary Air Control is a patented mechanism (Patent No: US 7,325,541 B2) that regulates the air flow into the firebox based on the temperature of the unit. It is located on the top of the firebox, at the front center of the unit. The combustion air control of the 32IN has two components: the Activator and the Burn Rate Selector. The left combustion control lever is the Activator. When starting a fire or adding a new load of wood, the Activator must be pushed in to allow a primary source of air to enter the firebox. The Activator will retract automatically with heat. The right combustion control lever is the Burn Rate Selector. The Burn Rate Selector can slide sideways to achieve different burn rates. When the Burn Rate Selector is positioned to the left, a maximum burn rate is achieved and when it is positioned to the right, a minimum burn rate is set. Please refer to page 31 of 32IN\_Tech\_DRAW.pdf for details on the Primary Air Control assembly.

#### **SECONDARY AIR CONTROL**

The Secondary Air Control is a patented mechanism (Patent No: US 9,476,593 B2) that regulates the air flow into the baffle system based on the temperature of the unit. It is located on the top of the firebox, above the secondary air intake channel. The secondary air control of the 30IN is factory set and has no intervention of the user. Please refer to page 32 of 32IN\_Tech\_DRAW.pdf for details on the Secondary Air Control assembly

### 3.3 AIR SUPPLY SYSTEM

#### Description

- Primary air: window wash design with air intake at the top of unit
- Secondary air: secondary baffle design with air intake at the top of unit. Refer appendix 6 for drawing details

#### Characterization

The following table shows the inlet and outlet sections of each system. The air introduction system number is referred to on a set of drawings in Appendix 6.

AIR INTRODUCTION SYSTEM		INLET (1) sq. in.			OUTLET (sq. in.)
Identification	Type	Imin	Imax	Controlled	
A *	Primary	1.18 in <sup>2</sup>	4.41 in <sup>2</sup>	Yes	4.06 in <sup>2</sup>
B *	Secondary	0 in <sup>2</sup>	1.75 in <sup>2</sup>	Yes	1.43 in <sup>2</sup>
C *	Pilot	N/A	N/A	No	-

\* This section would be filled by measuring and comparing with the manufacturer's drawings included in the test report.

#### Legend

Identification: Tag name referred to on drawings in Appendix 14, section airflow pattern

Type: Characterization of air intake

Imin: Minimum air intake of a particular air channel

Imax: Maximum air intake of a particular air channel

Controlled: Determines if a provision for air control is present

Outlet: Total air outlet of a particular air channel

### 3.4 OPERATION DURING TEST

#### Run #1.1

This run was performed on June 25<sup>th</sup> 2019. It lasted 176 minutes and a Maximum burn rate was obtained at 4.09 kg/hr & emission at 3.8 gr/hr. The convection fan was at automatic setting during the entire test. The air inlet damper was at the Maximum setting.

#### Run #1.2

This run was performed on June 25<sup>th</sup> 2019. It lasted 515 minutes and a minimum burn rate was obtained at 1.5 kg/hr & emission at 1.10 gr/hr. The convection fan was at automatic setting during the entire test. The air inlet damper was at the minimum setting.

#### Run #2.1

This run was performed on June 27<sup>th</sup> 2019. It lasted 214 minutes and a Maximum burn rate was obtained at 3.53 kg/hr & emission at 2.3 gr/hr. The convection fan was at automatic setting during the entire test. The air inlet damper was at the Maximum setting.

#### Run #2.2

This run was performed on June 27<sup>th</sup> 2019. It lasted 472 minutes and a Medium burn rate was obtained at 1.65 kg/hr & emission at 1.36 gr/hr. The convection fan was at automatic setting during the entire test. The air inlet damper was at the Medium setting.

- Details: Refer to the front page of each test run data sheets found in appendix for the detailed test sequence showing air supply settings and adjustments, fuel bed adjustments and operational specifics of the test unit.

#### Test fuel cribs

- Type of wood: Red Oak, 18 to 25% dry basis moisture content
- Description: for each test, description of the fuel crib is found on the front page of each test run data sheet together with photograph in appendix.

### 3.5 START-UP OPERATION

The complete manufacturer's firing procedure of each burn rate category is fully described in appendix 13.

### 3.6 SAMPLING LOCATIONS

Particulate samples are collected from the dilution tunnel at a point 15 feet from the tunnel entrance. The tunnel has two elbows in the system ahead of the sampling section. The sampling section is a continuous 20-foot section of 8-inch diameter pipe straight over its entire length. Tunnel velocity pressure is determined by a standard pitot tube located 48 inches from the beginning of the sampling section. Thermocouple is installed on the pitot tube to measure the dry bulb temperature. MC is assumed, as allowed, to be 4%. Tunnel samplers are located 56 inches downstream of the pitot tube and 24 inches upstream from the end of this section.

### 3.7 DRAWINGS

Various drawings of the stack gas sampling train and of dilution tunnel system are found in Appendix 6.

### 3.8 EMISSIONS EFFICIENCY TESTING EQUIPMENT LIST

The complete test equipment list together with all corresponding calibration data can be found in Appendix 3.

## 4 SAMPLING METHODS

### 4.1 PARTICULATE SAMPLING

Particulates were sampled in strict accordance with ASTM E2515. This method uses two identical sampling systems with Gelman A/E 61631 binder free (or equivalent), 47 mm diameter EMFAB TX40H 120-WW Pall filters. The dryers used in the sample systems are filled with "Drierite" before each test run.

## 5 QUALITY ASSURANCE

### 5.1 INSTRUMENT CALIBRATION

#### 5.1.1 GAS METERS

At the conclusion of each test program the gas meters are verified using the reference dry gas meter. This process involves sampling the train operation for 1 cubic foot of volume. With readings made to .01 fr', the resolution is 1 %, giving an accuracy higher than the 2% required by the standard.

#### 5.1.2 SCALES

Before each test program, the different scales used are checked with traceable calibration weights to ensure their accuracy.

#### 5.1.3 GAS ANALYZERS

The continuous analyzers are zeroed and spanned before each test with NBS traceable gases. A mid-scale multi-component calibration gas is then analyzed (values are recorded). At the conclusion of a test, the

instruments are checked again with zero, span and calibration gases (values are recorded only). The drift in each meter is then calculated and must not exceed 5% of the scale used for the test.

## 5.2 TEST METHOD PROCEDURES

### 5.2.1 LEAK CHECK PROCEDURES

Before and after each test, each sample train is tested for leaks. Leakage rates are measured and must not exceed 0.02 CFM or 4% of the sampling rate. Leak checks are performed checking the entire sampling train. Pre-test and post-test leak checks are conducted with a vacuum of 5 inches of mercury. Vacuum is monitored during each test and the highest vacuum reached is then used for the post-test vacuum value. If leakage limits are not met, the test run is rejected. During these tests, the vacuum is typically less than 2 inches of mercury. Thus, leakage rates reported are expected to be much higher than actual leakage during the tests.

### 5.2.2 TUNNEL VELOCITY FLOW MEASUREMENT

The tunnel velocity is calculated from a center point pitot tube signal multiplied by an adjustment factor. This factor is determined by a traverse of the tunnel as prescribed in EPA Method 1. Final tunnel velocities and flow rates are calculated from EPA Method 2, Equation 6.9 and 6.10. (Tunnel cross sectional area is the average from both lines of traverse.)

Pitot tubes are cleaned before each test and leak checks are conducted after each test.

### 5.2.3 PM SAMPLING PROPORTIONALITY (ASTM E2515)

Proportionalities were calculated in accordance with ASTM E2515. The data and results are found in appendix.

				AVERAGE	

$$v_s = K_p C_p (\sqrt{\Delta p})_{avg} \sqrt{\frac{(T_s)_{avg}}{P_s M_s}}$$

Where,

 $C_p$  = pitot tube coefficient, dimension less = 0.99 for standard pitot.

 $\Delta_p$  = manometer reading (inches H<sub>2</sub>O)

 $T_s$  = average absolute dilution tunnel temperature (°F + 460)

 $P_s$  = absolute dilution tunnel gas pressure or  $P_{bar} + P_{qg}$ 
 $P_q$  = static pressure in. H<sub>2</sub>O  
 { 13.6 }

 $M_s$  = 28.56, wet molecular weight of stack gas (alternatively, it may be measured)

 $K_p$  = 85.49 pitot tube constant, (conversion factor for English units)

 $\Delta_p$  avg. = average of the square roots of the velocity heads ( $\Delta_p$ ) measured at each traverse point.

### Description du test

Test standard	B415
Run #	2
Date	27-06-2019
Technicien	M.M
Project #	PI 20201

### Description de l'unité

Manufacturier	FOYER SUPREME	
Modèle	32 IN	
Combustion system	Non-Cat	
Appliance type	INSERT	
Firebox volume	2,98	cu ft.
Appliance weight empty	n.a	lbs
Fan (no, Standard, Option)	OPTION	

### Paramètres du test

Logging time	1	min
Manufacturer's rated heat output	n.a	BTU/h Donnée fournie par le manufacturier
Targeted category	1	
Targeted output	n.a	BTU/h
Cp steel	n.a	BTU/lb-°F

### Échantillonnage

Blank sampling rate	0,20	cuft/min
Internal probe diameter	0,18	in.
Calibration Factor (DGM #1):	0,999	Dimensionless
Equipment number (DGM #1):	EM 178	
Calibration Factor (DGM #2):	0,990	Dimensionless
Equipment number (DGM #2):	EM 179	
Calibration Factor (DGM #3):	0,997	Dimensionless
Equipment number (DGM #3):	EM 070	

### Tunnel

Targeted tunnel flow rate	300	scfm
Tunnel diameter	8	in.
Molecular weight	28,78	May be assumed to be 28,78 (EPA) Si B-415 = 29
Pitot tube type	Standard	
Pitot tube coefficient	0,99	Dimensionless

Project nu.	PI 20201
Date	27-06-2019
Technicien	m.m

### Fuel data

Fuel type	Cord
Fuel specie	Oak
HHV	20207,0 kJ/kg
%C	49,5
%H	6,6
%O	43,7
%Ash	0,2
HHV	8689,9 Btu/lb
LHV	7600,4 Btu/lb

Default Fuel Values		
	D. Fir	Oak/Maple
HHV	19 810	20 207
%C	48,73	49,5
%H	6,87	6,62
%O	43,9	43,7
%Ash	0,5	0,2
HHV (Btu/lb)	8519	8690
LHV (Btu/lb)	7451	7600

Adjunct to ASTM E XXXX Wood Heater Cordwood Test Method - May 10, 2017 Version

Cordwood Fuel Load Calculators - 10 lb/ft<sup>3</sup> Nominal Load Density

Core 45-65% of Total Load Weight, Remainder 35-55% of Total Load Weight

Values to be input manually

For All Usable Firebox Volumes - High Fire Test Only						
Nominal Required Load Density (wet basis)	10	lb/ft <sup>3</sup>				
Usable Firebox Volume	2,98	ft <sup>3</sup>				
Total Nom. Load Wt. Target	29,80	lb				
Total Load Wt. Allowable Range	28,30	to	31,30	lb		
Core Target Wt. Allowable Range	13,40	to	19,40	lb		
Remainder Load Wt. Allowable Range	10,40	to	16,40	lb		
					Mid-Point	
Core Load Pc. Wt. Allowable Range	4,50	to	7,50	lb	6,00	
Remainder Load Pc. Wt. Allowable Range	3,00	to	16,40	lb	9,70	
	Pc. #

				AVERAGE	

$$v_s = K_p C_p (\sqrt{\Delta p})_{avg} \sqrt{\frac{(T_s)_{avg}}{P_s M_s}}$$

Where,

$C_p$  = pitot tube coefficient, dimension less = 0.99 for standard pitot.

$\Delta_p$  = manometer reading (inches H<sub>2</sub>O)

$T_s$  = average absolute dilution tunnel temperature (°F + 460)

$P_s$  = absolute dilution tunnel gas pressure or  $P_{bar} + P_{qg}$

$P_q$  = static pressure in. H<sub>2</sub>O  
 { 13.6 }

$M_s$  = 28.56, wet molecular weight of stack gas (alternatively, it may be measured)

$K_p$  = 85.49 pitot tube constant, (conversion factor for English units)

$\Delta_p$  avg. = average of the square roots of the velocity heads ( $\Delta_p$ ) measured at each traverse point.

## Glass Technical Specs

### PYROCERAM®III Clear Glass-Ceramic

You can trust PYROCERAM®III for the very best in high-temperature performance. Made from a special composition of clear glass-ceramic, PYROCERAM®III withstands even the highest heat conditions (up to 1300°F, or 700°C), due to its low coefficient of expansion ( $0 \pm 3.0 \times 10^{-7} \text{K}^{-1}$ ).

PYROCERAM®III creates a tranquil, warm atmosphere in front of your fireplace or stove due to its excellent transmission of visible light and its light amber tint.

#### PHYSICAL PROPERTIES

The physical and chemical properties of EuroKera glass-ceramic sheets are tested in our laboratories in accordance with relevant DIN, NF, ISO or EN specifications or additional proprietary specifications if necessary. Nevertheless, slight variations from the figures given in this section remain possible but will not affect the capacity of the product.

EuroKera glass-ceramic is UL Component registered, a mark of quality indicating that EuroKera products have passed the stringent testing requirements of the Underwriters Laboratories.

#### **Dimensional Information**

Glass Thickness

Maximum Size (sheet)

Cut Sizes

#### **Available In**

3mm, 4mm or 5mm

2005mm by 1100mm

Custom as requested

#### THERMAL PROPERTIES

PYROCERAM®III glass-ceramic remains unchanged after being subjected to the following conditions:

#### **Condition**

Continuous Use

Time limited peak use

#### **Maximum Temperature**

1,292°F (700°C)

1,472°F (800°C)

#### **Property**

Coefficient of expansion (20° to 700°C)

Mean specific heat (20° to 100°C)

Resistance to thermal gradients

Thermal shock resistance

#### **Value**

$0 \pm 3.0 \times 10^{-7} \text{K}^{-1}$

0.8 (J/g. K)

$\Delta T \text{ max.} = 700\text{K}$

$\Delta T \text{ max.} = 700\text{K}$

## MECHANICAL PROPERTIES

<b>Property</b>	<b>Value</b>
Specific mass	2.55
Young's Elasticity modulus (E=)	94.3 (GPa)
Torsion modulus (G=)	37.8 (GPa)
Poisson ratio ( $\mu$ )	0.25
Minimal bending strength	>110 (MPa)
Knoop hardness (load 1 N)	705

## OPTICAL PROPERTIES

<b>Property</b>	<b>Value</b>
Refractive Index	1.55 (Approx.)
ABBE Number	55.4 (Approx.)
UV Transmission for 3mm thickness	< 1% (Wavelength < 355 $\mu$ m)
Photo elastic coefficient	3.11 (Brewster)

## ELECTRICAL PROPERTIES

### **Electrical resistivity (where $\rho$ is in (ohm • cm))**

log<sub>10</sub>  $\rho$  6.8 at 482°F (250° C)

log<sub>10</sub>  $\rho$  5.4 at 662°F (350° C)

log<sub>10</sub>  $\rho$  2.7 at 1,292°F (700° C (Estimated))

### **Dielectric constant**

8.1 at 102 Hz

7.5 at 104 Hz

7.3 at 106 Hz

### **Dissipation factor**

40 x 10<sup>-3</sup> at 102 Hz

17 x 10<sup>-3</sup> at 104 Hz

12 x 10<sup>-3</sup> at 106 Hz

## CHEMICAL PROPERTIES

<b>Property</b>	<b>Class</b>
Water resistance (ISO 719)	Class 1
Acid resistance (DIN 12 116)	Class 1
Alkali resistance (ISO 695)	Class 1

## APPENDIX 7: Operator's manual

# 1 SAFETY

SUPREME FIREPLACES INC. congratulates you on purchasing a LUMIS wood burning fireplace insert. This insert complies with the ULC S628 and UL 1482 standards. In addition, this wood insert is certified to comply with Phase II particulate emission standards from the US Environmental Protection Agency.

**SAFETY NOTICE:** Carefully read this manual before installation and operation of this insert. If not properly installed, a house fire may result. To reduce the risk of a fire, follow the installation instructions. Failure to follow instructions presented in this manual can lead to property damage, bodily injury or even death. Alterations or modifications made on the unit or the installation is strictly forbidden as it may predispose the user to hazardous risks. Contact your local building or fire officials for restrictions and installation inspection requirements in your area and the need to obtain a permit.

**WARNING:** This unit is hot during operation; keep children, pets, flammable liquids, or combustible materials at a safe distance. Ensure that all clearances to combustible materials are respected. Contact with the unit during operation may cause severe harm. Install a safety screen to keep children and pets away.

## CAUTION:

- Do not connect this unit to a chimney flue serving another appliance.
- Do not connect to any air distribution duct or system.
- Never use chemicals to ignite the fire.
- Never burn waste or flammable fluids (such as gasoline, naphtha, or engine oil).
- Only burn dry natural cordwood.
- Never leave the unit unattended with the door open or unlatched.
- Only refuel this unit when the wood is reduced to embers.
- Always keep the door closed during operation.
- Do not operate this unit with a fireplace grate.
- Do not install an unvented gas log set into the firebox.
- Do not install this unit in a mobile home.
- Do not clean or service the unit while it is hot.
- Allow proper air flow by keeping the louvers/openings clear of any obtrusions.

Note: Failure to respect the above cautions may cause damages to the unit, damages to personal property, bodily harm and will void the warranty. "This wood heater needs periodic inspection and repair for proper operation. It is against federal regulations to operate this wood heater in a manner inconsistent with operating instructions in this manual."

We recommend that our woodburning hearth products be installed and serviced by professionals who are certified in the U.S. by the National Fireplace Institute® (NFI) as NFI Woodburning Specialists or who are certified in Canada by Wood Energy Technical Training (WETT).

This product can expose you to chemicals including carbon monoxide, which is known to the State of California to cause cancer, birth defects or other reproductive harm. For more information go to [www.P65warnings.ca.gov/](http://www.P65warnings.ca.gov/)

## **2 COMPONENTS**

### **2.1 Overall Dimensions**

## 2.2 Specifications

Appliance Type:	Adjustable Burn Rate Wood Heater – Non-Catalytic
Fuel Type:	Dry Cordwood
Maximum Log Length:	ZZZ in (ZZZ cm)
Burn Time <sup>1</sup> :	6 to 10 hrs
Firebox Volume:	3.0 ft <sup>3</sup> (0.085 m <sup>3</sup> )
Heating Area:	500 to 2,000 ft <sup>2</sup> (45 to 185 m <sup>2</sup> )
Average Particulate Emissions Rate <sup>2</sup> :	1.59 gm/hr
Average CO Emissions Rate <sup>3</sup> :	119.4 g/hr
EPA Protocol:	Method ALT-125
Efficiency:	HHV <sup>4</sup> : 66.07%   LHV <sup>5</sup> : 71.09%
Heat Output:	19,029 to 49,358 BTU/hr (5,576 to 14,465 W)
Optimum Efficiency:	75%
Optimum Heat Output:	100,000 BTU (29.3 kWh)
Efficiency Protocol:	CSA B415.1-10

### WARRANTY REGISTRATION

Please register your SUPREME product online at <http://www.supremem.com/registration.php> to ensure full warranty coverage. Proof of purchase is required for all warranty claims.

<sup>1</sup> Depending on combustion air control setting (see Section 4.3 for further details).

<sup>2</sup> Officially tested and certified by an independent.

<sup>3</sup> Note that rate is smaller for low to medium/low burn rates.

<sup>4</sup> Higher Heating Value.

<sup>5</sup> Lower Heating Value.

## 2.3 Combustion Air Control

The Combustion Air Control is a patented mechanism (Patent No: US 7,325,541 B2) that regulates the air flow into the firebox based on the temperature of the unit. It is located on the top of the firebox, at the front center of the unit. The combustion air control of the LUMIS has two components: the Activator and the Burn Rate Selector. The left combustion control lever is the Activator. When starting a fire or adding a new load of wood, the Activator must be pushed in to allow a primary source of air to enter the firebox. The Activator will retract automatically with heat. The right combustion control lever is the Burn Rate Selector. The Burn Rate Selector can slide sideways to achieve different burn rates. When the Burn Rate Selector is positioned to the left, a maximum burn rate is achieved and when it is positioned to the right, a minimum burn rate is set.

**WARNING: Never manipulate the Combustion Air Control with bare hands as it gets hot when the LUMIS is in operation. Use the Cold Hand Key to adjust the Combustion Air Control.**

## 2.4 Cold Hand Key

The Cold Hand Key is an accessory that comes standard with the LUMIS insert. The Cold Hand Key is a tool used to manipulate the Combustion Air Control Levers when it is hot.

## 2.5 Chimney Sweeping Cap

The chimney sweeping cap found at the baffle of the LUMIS allows easy access for chimney sweeping without having to remove any components of the firebox.

**WARNING:** The chimney sweeping cap must always block access to the chimney during combustion. A chimney sweeping cap that is not blocking the baffle hole during combustion is a safety hazard, will overheat the fireplace and void the warranty.

## 2.6 Door

The LUMIS wood burning insert comes with a Pyroceramic glass panel door. Pyroceramic is the highest grade available for fireplaces and stoves and can withstand temperatures up to 1300°F. To remove the door, open the door, lift it and pull it towards the bottom until the rod exits from the hinge holes.

**NOTE: The door of the LUMIS must remain closed at all times during operation.**

## 2.7 Optional Blowers

The LUMIS wood burning fireplace insert can be equipped with two AC centrifugal compact fans on either side of the surround (**electrical rating: 115V, 60Hz, and 19W**).

**CAUTION: Make certain that the fireplace is not in operation and the blowers are unplugged before accessing the electrical wiring.**

Plug the power cord into an 115V **grounded** outlet for protection against a power surge. The blowers will turn on and turn off automatically during the operation of the unit. As the temperature of the fireplace insert increases and the heat activated sensor reaches 95°F, the fans will turn on. Note that the average time it takes for the fans to activate is between 30 to 45 minutes after starting a fire. The fans will turn off once the fireplace has cooled down and the heat activated sensor reaches 85°F. The speed of the fans can be adjusted with an optional grounded variable speed control plugged into the nearest outlet. It is safe to operate the LUMIS in the event of a power failure (fans not powered).

## 2.8 Surround

NOTE: SUPREME FIREPLACES INC. reserves the right to alter the dimensions of the surrounds without prior notice.

## 2.9 Adjustable Legs

The LUMIS insert comes with three adjustable legs in the bottom of its firebox to allow adjustment of the height for leveling purposes.

## 2.10 Liner Adaptor

The Liner Adaptor is a component that comes with the LUMIS and is required to connect a 6" stainless steel liner to the unit.

## 2.11 Metal Tag

The Metal Tag specifies that alterations have been made to the masonry fireplace to accommodate the LUMIS insert. The metal sheet having the Metal Tag is to be installed with two screws at the hearth of the masonry fireplace. Note that the Metal Tag must be installed with the writing face upwards so that it is visible if the insert fireplace is removed.

The Metal Tag reads as follows:

*This fireplace has been altered to accommodate a fireplace insert and should be inspected by a qualified person prior to re-use as a conventional fireplace.*

*Ce foyer a été modifié afin d'y insérer un foyer encastrable et doit être inspecté par une personne qualifiée avant sa réutilisation comme foyer conventionnel.*

## 2.12 Serial Number

The certification label contains important information regarding the installation and operation of the LUMIS fireplace insert. In addition, the serial number of the unit is permanently embossed onto the top right corner. The certification label is located at the bottom right corner of the door and is accessible by opening the door and pulling the plate.

## 3 INSTALLATION INSTRUCTIONS

The masonry fireplace is to be constructed in accordance to N.F.P.A. 211 (Latest Edition), Standards of Chimney, Fireplaces, Vents and Solid-Fuel-Burning Appliances and Equipment. The LUMIS fireplace insert is intended only for masonry fireplaces installed with a continuous chimney liner of 6 inch diameter extending from the fireplace insert to the top of the chimney. This insert must be connected to a code-approved masonry chimney or listed factory-built fireplace chimney with a direct flue connector into the first chimney liner section. The chimney size should not be less than or more than three times greater than the cross-sectional area of the flue collar. The chimney liner must conform to the Class 3 requirements of CAN/ULC-S635, Standard for Lining Systems for Existing Masonry or Factory-Built Chimneys and Vents or CAN/ULC-S640, Standard for Lining Systems for New Masonry Chimneys. Contact a local building inspector for information on additional requirements and/or codes in your area.

**CAUTION: Read these instructions carefully before starting the installation. Failure to follow these instructions may result in property damage, bodily harm and even death. Modifications of the instructions presented in this section without written authorization from SUPREME FIREPLACES INC. will void the warranty.**

Be sure that the fireplace and chimney are clean and in good condition. Seal all cracks using stove cement. Seal permanently any openings between the masonry of the fireplace and the facing masonry. Remove or keep permanently open the existing damper of the fireplace. If there is an accumulation of creosote in the chimney or flue, it must be thoroughly cleaned. When installing, operating and maintaining a solid fuel heater, respect basic standards for fire safety.

Table 1: Minimum Opening Dimensions

Width (Front)	EEE" (MMM mm)
Width (Back)	EEE" (MMM mm)
Height	EEE" (MMM mm)
Depth	EEE" (MMM mm)

**WARNING: Do not remove bricks or mortar from the masonry fireplace.**

Refer to Table ZZZ, Figure ZZZ and Figure YYY for minimum opening dimensions of the masonry fireplace.

**NOTE:** The non-combustible hearth must extend a minimum of OOO" (RRR mm) from the front and 8" (203mm) on each side of the masonry fireplace opening and must be a minimum of LLL" long.

### 3.1 Preparing the Firebox for Installation

- Remove the door by opening it, lifting it, and pulling it towards the bottom until the rod exits from the hinge holes.
- Install the adjustable legs. The adjustable legs must extend 1 ¼ inch from the bottom of the firebox.  
**NOTE: To avoid damages during shipping/handling, the adjustable legs aren't factory installed.**
- Push the chimney sweeping cap upwards and place it to the side.

### 3.2 Liner Installation

- Determine the required length of liner by measuring the bottom of the hearth to the top of the existing chimney. NOTE: Additional length of the liner is needed for proper installation of the flashing and chimney cap. **WARNING: The minimum and maximum height of the liner is 15' and 35' respectively.**
- Slide the stainless steel liner down the existing chimney.
- Lower the liner 24 inches from the hearth.
- Fill the space between the liner and the baffle of the existing chimney with Stone Wool insulation to prevent heat from escaping.

### 3.3 Liner Adaptor Installation

Insert the 6" diameter liner adaptor at the end of the liner. The liner must be flush with the inferior rim of the adaptor.

- a) Tighten the clamp to secure the liner with the liner adaptor.
- b) Secure the liner adaptor in place with the sheet metal screw provided.

### 3.4 Firebox Installation

- a) Slide the LUMIS fireplace insert into the masonry fireplace.
- b) Align the liner adaptor with the top opening of the exterior casing.
- c) Insert your hand in the chimney sweeping cap opening and pull the liner down by the handle of the adaptor.
- d) Use your thumb to bend the 4 tabs of the liner adaptor outward to secure the liner in place.
- e) Reposition the chimney sweeping cap back in the chimney sweeping cap hole of the baffle.

**WARNING: The chimney sweeping cap should be blocking the access to the chimney at all times during combustion. A chimney sweeping cap that is not blocking the baffle hole during combustion is a safety hazard, will overheat the fireplace and void the warranty.**

### 3.5 Power Cord Side Reversal

The blowers of the LUMIS insert are factory installed with the power cord located on the left side. However, the power cord location can be switched to the right side by following the below instructions:

- a) Unfold the cover of the electrical wiring located below the door.
- b) Remove the insulating blanket that covers the wiring.
- c) Loosen the nut of the strain relief fixing the power cord.
- d) Bring the power cord to the opposite side and secure the strain relief by tightening the nut.
- e) Place back the insulating blanket over the wiring.
- f) Bend the cover to its original position.

### 3.6 Surround Installation

- a) Install the surround and secure it with four screws, two on either side.
- b) Install the door by inserting the upper rod into the upper hole and then lowering the lower rod into the lower hole.
- c) Inspect the installation. If the surround is not flush against the wall, level the firebox by using the adjustable legs.

### 3.7 Clearances to Combustibles

Note that the non-combustible hearth must extend a minimum of **YYY"** (**YYYmm**) from the front and **ZZZ"** (**ZZZmm**) on each side of the masonry fireplace opening. **WARNING: Keep a minimum distance of 5' (152cm) from the unit to any combustible material (such as firewood, furniture, and drapes) as a fire hazard precaution.**

The depth of the mantle is measured from the face of the fireplace door. When the non-combustible wall is recessed, the depth of the mantle can be increased by the amount of the recess. **Note that a mantel cannot be installed below the minimum clearance of 36.75" (from the bottom of the mantel to the base of the unit).**

Sidewall from outer edge of fuel door	<b>ZZZ"</b> ( <b>ZZZmm</b> )
Side trim from outer edge of fuel door	<b>ZZZ"</b> ( <b>ZZZmm</b> )
Top trim from top edge of fuel door	<b>ZZZ"</b> ( <b>ZZZmm</b> )
Protruding mantel ( <b>CCC"</b> ) from floor	<b>ZZZ"</b> ( <b>ZZZmm</b> )
Protruding mantel ( <b>CCC"</b> ) from top edge of fuel door	<b>ZZZ"</b> ( <b>ZZZmm</b> )

Table 3: Depth of Mantle with Respect to Distance of Base

Maximum Mantle Depth	Distance from the Base of the LUMIS to the Bottom of the Mantle
<b>ZZZ"</b> ( <b>ZZZmm</b> )	<b>ZZZ"</b> ( <b>ZZZmm</b> )
<b>ZZZ"</b> ( <b>ZZZmm</b> )	<b>ZZZ"</b> ( <b>ZZZmm</b> )
<b>ZZZ"</b> ( <b>ZZZmm</b> )	<b>ZZZ"</b> ( <b>ZZZmm</b> )

The depth of the mantle is measured from the face of the fireplace door. When the non-combustible wall is recessed, the depth of the mantle can be increased by the amount of the recess. **Note that a mantel cannot be installed below the minimum clearance of ZZZ" (from the bottom of the mantel to the base of the unit).**

## 4 OPERATION INSTRUCTIONS

**WARNING: READ THE OWNER'S MANUAL CAREFULLY BEFORE USING YOUR FIREPLACE INSERT.** The LUMIS is not intended to serve as a primary source of heat; the home where the LUMIS fireplace insert will be installed must have a primary source of heat. SUPREME is not responsible for heating costs related to other sources of heat.

### 4.1 Fuel

The LUMIS is designed to burn natural wood only. Higher efficiencies and lower emissions generally result when burning air dried seasoned hardwoods (moisture content below 20%), as compared to softwoods or to green or freshly cut hardwoods. The following are a few signs indicating that firewood is sufficiently dry for use: (a) cracks on the ends and surface of the logs, (b) lighter in weight, and (c) color (yellow/grey). It is recommended to use a moisture meter with pin sensors for determining accurately the moisture content of firewood (read manufacturer's instruction manual before operating). The optimum log length is between 16 to 22 inches, preferably split in halves or quarters and left to dry under a cover or away from external elements for a minimum of one year prior to use. Use good quality dry cordwood only. **DO NOT** burn garbage, lawn clipping, yard waste, materials containing rubber (including tires), materials containing plastic, waste petroleum products, paints, paint thinners, asphalt products, materials containing asbestos, construction debris, demolition debris, railroad ties, pressure-treated wood, manure, animal remains, coal, salt water driftwood or other previously salt water saturated materials, unseasoned wood, paper products, cardboard, plywood, particle boards, or other foreign materials in this product. The prohibition against burning these materials does not prohibit the use of fire starters made from paper, cardboard, saw dust, wax and similar substances for the purpose of starting a fire in an affected wood heater. Burning these materials may result in release of toxic fumes or render the heater ineffective and cause smoke. Do not over fire the LUMIS fireplace insert. Over firing will damage the fireplace, is hazardous and will void the warranty. **NOTE:** Gas logs cannot be installed in the LUMIS fireplace insert.

**WARNING: Never use gasoline, gasoline-type lantern fuel, kerosene, charcoal lighter fluid, or similar liquids to start or "freshen up" a fire in this unit. Keep all such liquids well away from the fireplace insert while it is in use.**

Ecological or compressed logs containing chemical additives are not tested and approved to be used with the LUMIS. Using them will overheat and damage the fireplace and void the warranty. Ecological or compressed logs that are 100% wood and contain no other additives can be safely used in the LUMIS. Never use more than three of these logs at a time. Using more is not only dangerous, but will damage the fireplace and void the warranty. Follow the ecological log manufacturer's safety guidelines and recommendations and be sure that they are intended for use in fireplaces. Reload only once the previous load of wood has been consumed and only embers remain.

**WARNING: Do not keep the door open while the fireplace is in operation.**

### 4.2 First Fires

For the first 3 fires, burn a maximum of 3 logs at the medium to low burn rate (refer to Section 4.3) to allow for proper conditioning of the unit. Due to oil residues and the curing of the paint of the fireplace, it is normal to smell an odor for the first fires of the LUMIS. Open a window or a door near the fireplace insert to ventilate the house during the first fires. Oil residues may cause light smoking.

## 4.3 Operating the Combustion Air Control

The burn rate and the heat output are related to the amount of air entering into the firebox. The combustion air control of the LUMIS has two components: the Activator and the Burn Rate Selector. When starting the fire or when adding a new charge of wood, the fireplace needs additional air in order to establish a good fire. When the wood starts to burn properly, the amount of air can be reduced depending on the heating requirements.

The left combustion control lever is the Activator. When starting a fire or adding a new load of wood, the Activator must be pushed in to allow maximum air to enter the firebox. The right combustion control lever is the Burn Rate Selector. The Burn Rate Selector can slide sideways to achieve different burn rates. When the Burn Rate Selector is positioned to the left, a maximum burn rate is achieved and when it is positioned to the right, a minimum burn rate is set. Keeping the Burn Rate Selector to the right will burn the wood slower. Keeping the Burn Rate Selector to the left will provide a stronger fire and keep the glass of the fireplace cleaner for longer. Adjust the burn rate according to your heating requirements and the quality of your wood. The combustion air control will automatically and gradually close the primary air source to the selected burn rate setting (right lever) with the presence of heat to maximize the burn time.

**NOTE:** The Burn Rate Selector can remain at the same setting at all times if the burn rate is satisfactory. However, the Activator must be pushed in when starting a fire or when adding a new load of wood.

**WARNING:** The combustion air openings should never be obstructed.

**WARNING:** Never manipulate the Combustion Air Control with bare hands as it gets hot when the LUMIS is in operation. Use the Cold Hand Key to adjust the Combustion Air Control.

**WARNING:** This wood heater has a manufacturer-set minimum low burn rate that must not be altered. It is against federal regulations to alter this setting or otherwise operate this wood heater in a manner inconsistent with operating instructions in this manual.

## 4.4 Starting a Fire

The LUMIS has patented technologies and innovative features that make starting a fire quick and easy. Before starting a fire, assure that all the safety precautions mentioned in the owner's manual are being respected. The following instructions describe starting a fire in LUMIS fireplace using a "top-down" approach, which results in a cleaner, more efficient, and longer burn:

- a) Place small to medium size logs in the hearth of the firebox in the north-south direction. The logs should sit directly on the hearth with adequate space between them to allow for proper air flow. Do not use a fireplace grate.
- b) Place kindling wood or small logs on top of the logs from step a). Keep a good distance from the top layer of the kindling/logs and the baffle system (approximately 3 inches).
- c) Push the left combustion control lever (the Activator) inwards.
- d) Slide the right combustion control lever (the Burn Rate Selector) to the maximum burn rate position (towards the left)
- e) To achieve a "top-down" combustion, ignite the top layer of kindling/logs. A firestarter can be used to facilitate ignition.
- f) Once the top layer has properly ignited, close the door. Do not leave the door open for more than 2 minutes.

**CAUTION:** The wood should be placed away from the door to avoid damage to the glass.

**WARNING:** Do not use fire accelerants to rekindle the fire if the first attempt to start the fire failed. Do not open the door. Simply reactivate the Activator by pushing it inwards.

**NOTE:** Sufficient air exchange is necessary for the fireplace to operate properly. Air is required in order to maintain the combustion of the fireplace. If the house is airtight, the fireplace may not function properly. If the

fireplace is deprived of air, it will be necessary to provide a source of fresh air into the dwelling. This may be done by using an air exchanger unit or simply by opening a window or a door near the fireplace partially for a few minutes. Make sure that other equipment such as the kitchen exhaust fans or oil central heating systems does not affect the fireplace functionality. Large return ducts of central heating systems located in the same room as the fireplace may affect the proper functioning of the unit and may cause smoking.

## 4.5 Adding a Load of Wood

**WARNING:** Open the door to reload only when the wood has been reduced to embers, otherwise there is a risk of smoke infiltration into the house.

When the wood has been reduced to embers and there's no visible flame, you may add a new load.

- a) Crack the LUMIS door open and wait a few moments before opening the door completely.
- b) Use your fireplace tools to gather the remaining embers at the center of the firebox.
- c) Position the Burn Rate Selector to the desired setting and activate the Activator by pushing it in.
- d) Once the embers begin to glow red, add the new load of wood in the firebox.
  - a. Place the first row of wood (2 pieces) in the north-south direction on the center of the hearth, with an adequate space between the logs.
  - b. Place the second row of wood (2 pieces), in the east-west direction with an adequate space between the logs.
  - c. Place the fifth log on top of the first and second row, in a diagonal direction
- e) Keep the door of the LUMIS slightly unlatched until you see a flame in the firebox. Never leave the LUMIS door unlatched without constant supervision.
- f) Completely latch the LUMIS door.

Assure that a flame is maintained. Avoid wood smoldering on top of embers as this will result in a dirty glass, excessive emissions, chimney creosote buildup and poor heat output. If wood is smoldering, ensure the Activator has been activated and unlatch the door slightly with supervision until a flame has been maintained.

**WARNINGS: Over firing the unit may result in overheating and can damage the fireplace and/or result in fire hazards. The maximum firewood load must not exceed 5 large sized logs (approximately 32 pounds). This fireplace has been designed to burn with the door closed. When the fireplace is being used, the door should remain closed at all times. Failing to do so is a safety hazard, will damage the fireplace and void the warranty.**

## 4.6 Fan Operation (Optional)

An optional blower kit can be installed into the LUMIS fireplace insert. It includes two blowers mounted at the bottom on either side of the firebox and a heat sensory thermodisk. A variable speed control can be installed to adjust the speed of the fans. Do not install a substitute kit as this may result in overheating and risk of fire.

- a) Connect the speed control to an 115V properly grounded outlet that accepts three-pronged plugs.  
**WARNING: Do not remove the grounding prong from the speed control.**
- b) Plug the power cord to the speed control.
- c) Turn the speed control knob to the right until it clicks. The fans will start and stop automatically in the presence and absence of heat respectively.

Note that the power cord can be plugged directly to the to the 115V outlet, bypassing the speed control. When the fans are activated, they will run at the maximum speed. To stop the fans during operation of the unit, unplug the power cord.

**NOTE:** Standard location of the power cord is on the left when facing the surround, but can be switched to the opposite side. Please see Section 3.5 [Power Cord Side Reversal](#) for instructions on how to reverse the

location of the power cord. **CAUTION: Do not route the power cord under the unit, on hot surfaces, and on sharp edges.**

Once the power cord has been plugged to the nearest 115V outlet, the fans will turn on and turn off automatically. When the insert gets hot and the thermodisk reaches 95°F, the fans will turn on. The average time it takes for the fans to activate is 30 to 45 minutes after starting a fire as explained in this manual (Section 4.4 [Starting a Fire](#)). The fans will turn off once the insert has cooled down and the thermodisk reaches 85°F. The speed of the fans can be adjusted with the optional variable speed control.

# 5 TROUBLESHOOTING

## 5.1 Backdraft / Smoking

Draft is the force created by a difference in pressure, which moves air from the appliance up through the chimney. It is important to operate the LUMIS with proper draft to ensure optimal performance of the unit. Draft is depended on the length of the chimney, local geography, nearby obstructions and other factors. Proper draft results in an upwards flow through chimney, which prevents smoke infiltrating into the house during operation of the unit. As the temperature of the unit and chimney rises during combustion, the draft consequently increases due to a higher difference in pressure.

In contrast, backdraft is air flow from the chimney into the house, which results in smoke infiltration from the appliance and/or the chimney joints during operation. The unit is experiencing backdraft if air is flowing out from the exhaust of the baffle system (within the firebox). Backdraft is most commonly caused by fans around the house (such as in the kitchen and bathrooms) simultaneously in operation, insufficient length of the chimney (less than 15 feet), inadequate ventilation, or a blocked chimney. Refer to the following suggestions to eliminate backdraft:

- Close any fans operating around the house (specifically for the duration of ignition).
- Clean the chimney of any obtrusions (when the unit is cold).
- Open one window or one door near the LUMIS.
- Heat the chimney by burning newspaper near the exhaust of the baffle system.

## 5.2 Over Firing

The appearance of a red glow on the exterior of the firebox (top and sides) and/or on the flue is a sign of over firing. Excess air entering the firebox, over fueling, or an abnormal strong draft causes the unit to reach drastic temperatures from an uncontrollable combustion. Over firing is a safety hazard and may result in permanent damage to the unit. In the occurrence of over firing:

- a) Make sure the LUMIS door is properly closed.
- b) Manually close the Combustion Air Control by pulling the Activator (left lever).
- c) Turn on the blower to the maximum speed. The red glow on the exterior of the firebox and/or the flexible liner should gradually disappear.

**WARNING: Do not touch hot surfaces with bare hands. Always wear heat protecting gloves and use fireplace tools.**

Guideline to avoid over firing:

- Always keep the door closed during operation.
- Inspect regularly the door gasket/glass and replace accordingly.
- Always operate the unit with the chimney sweeping cap in position, blocking the hole in the baffle.
- Never load more than 32 lbs of wood at a time.
- Ensure that there is no excess draft.

**WARNING: Failure to follow the above guideline will void the warranty. Over firing is a safety hazard, can cause irreversible damages to the LUMIS and will void the warranty.**

## 6 MAINTENANCE

### 6.1 Disposal of Ashes

Ashes should be placed in a metal container with a tight fitting lid. The closed container of ashes should be placed on a non-combustible floor or on the ground, well away from all combustible materials, pending final disposal. If the ashes are disposed of by burial on soil or otherwise locally dispersed, they should be retained in the closed container until all cinders have been thoroughly cooled. **CAUTION: Always wear heat resistant gloves when removing the ashes from the firebox.**

- a) Let the firebox cool to ambient temperature before removing the ashes. It is recommended to remove the ashes once the bed has exceeded a height of 4 inches.
- b) Slowly open the door to prevent ashes from coming into the room.
- c) Place an ash bucket (metal container) near the fireplace, onto the non-combustible hearth.
- d) Using a shovel and brush, remove the bulk of the ashes from the firebox into the ash bucket. Note that it is not necessary to keep a thin bed of ashes for the next fire.
- e) Store the ash bucket (with the tight-fitting lid) on a non-combustible surface, away from any combustible materials, pending final disposal.

### 6.2 Chimney Maintenance

**Creosote – Formation and Need for Removal:** When wood is burned slowly, it produces tar and other organic vapors, which combine with expelled moisture to form creosote. The creosote vapor condenses in the relatively cool chimney flue of a slow-burning fire. As a result, creosote residue accumulates on the flue lining. When ignited, this creosote makes an extremely hot fire. The chimney connector and chimney burning wood or coal should be inspected at least once every two months during the heating season to determine if creosote buildup has occurred. Note that continuously operating the unit with green or wet wood will result in premature creosote buildup. **Never use chemical cleaners for your chimney.**

**WARNING: In the case of a chimney fire: 1) close the door of the fireplace; 2) set the burn rate of the Combustion Air Control to minimum (Section 4.3 [Operating the Combustion Air Control](#)); 3) call the local fire department (if assistance is needed); 4) use a dry chemical fire extinguisher (baking soda or sand) to control the fire.**

**CAUTION: Never use water to extinguish a fire as it may result to dangerous steam explosions. Do not use the unit until the chimney is inspected and repaired (if needed) by a qualified technician.**

**NOTE:** Do not clean the chimney when the unit is in operation/hot. Follow the instructions below for sweeping the chimney of a LUMIS fireplace insert:

- a) Open the door of the unit.
- b) From within the firebox, displace the chimney sweeping cap located in the baffle by lifting and moving it to the side.
- c) Close the door of the unit.
- d) Using an appropriate sized chimney sweeping brush, clean the chimney from any creosote buildup and other residues.
- e) Remove all the fallen/loose creosote/residues from the firebox and baffle system (a shop vacuum cleaner can be used for a thorough cleaning).
- f) Place back the chimney sweeping cap.

**CAUTION: Operating the unit without the chimney sweeping cap in position will result in over firing and void the warranty.**

## 6.3 Cleaning of Glass

It is recommended to clean the glass door with a soft cloth, dampened with a non-abrasive solution, such as soap and water.

**CAUTION: Cleaning the glass with an abrasive solution will result in surface scratches, reducing glass transparency and resistance to impacts.**

The glass of the door may be cleaned with commercial products intended for fireplaces and stoves. After cleaning the glass, remove any remaining solutions with a wet cloth to avoid chemical reactions at elevated temperatures (“cloudiness” on the surface of the glass).

**CAUTION: Do not apply commercial cleaners onto any painted surfaces as discoloration/peeling may occur.**

**NOTE: Never clean the glass when the unit is in operation or hot.**

## 6.4 Replacement of Door Gasket

SUPREME FIREPLACES INC. assembles heat resistant graphite coated gaskets on the doors of all products, allowing for a proper seal of the unit at extreme temperatures (up to 1000°F). It is recommended to perform a weekly visual check on the condition of the ¾” gasket to ensure proper operation of the unit. The ¾” gasket of your door needs to be replaced when 1) the fibers of the gasket are coming loose and 2) the gasket is disintegrating. Failure to replace a gasket under the mentioned conditions can cause irreversible damage to the unit due to over firing. Refer to the following instructions for replacing the ¾” gasket:

- a) Order the replacement kit for the LUMIS ¾” door gasket.
- b) Remove the door from the firebox and place it face down on a soft surface. NOTE: Rotate the handle to permit proper placing.
- c) Cover all painted surfaces of the door to avoid damages.
- d) Using a wedging tool or flat head screwdriver, gently remove the old ¾” gasket (along with the old silicone) from the door framing.
- e) Apply a bead of high temperature silicone along the groove of the metal brackets.
- f) Place the new ¾” gasket around the door framing and cut any excess gasket with scissors. NOTE: It is recommended to tape the extremity of the gasket for a cleaner result.

Give significant amount of time to allow the silicone to cure before reinstalling the door onto the firebox. A slight resistance is expected when closing the door with the new ¾” gasket; the door will close normally after the gasket has taken proper shape.

## 6.5 Replacement of Glass

SUPREME FIREPLACES INC. uses a high quality 5mm thick Pyroceram III / Keralite ceramic glass that can withstand temperatures up to 1300°F. It is recommended to perform a weekly visual check for any damages or cracks on the glass.

**WARNING: Avoid striking the glass and slamming the door shut. Never operate the unit with a broken or damage glass.**

**CAUTION: Wear protective gloves when handling broken glass.** Refer to the following instructions for replacing the glass:

- a) Order the replacement kit for the LUMIS glass.
- b) Remove, clean, and dispose any broken glass from the door and the surroundings.
- c) Remove the door from the firebox and place it face down on a soft surface. NOTE: Rotate the handle to permit proper placing.

- d) Using a wedging tool or flat head screwdriver, gently remove the  $\frac{3}{4}$ " gasket (along with the silicone) from the door framing.
- e) Using a wrench, remove the 8 nuts fastened around the door framing.
- f) Remove the first row of metal brackets (2 small and 2 big) and thin gasket.
- g) Remove the damage glass and clean thoroughly the door framing from loose glass fragments.
- h) Place the new glass onto the second row of thin gasket, centered with the door framing.
- i) Place back the first row of metal brackets (2 small and 2 big) and thin gasket.
- j) Using a wrench, fasten the 8 nuts around the door framing (do not over-tighten).
- k) Apply a bead of high temperature silicone along the groove of the metal brackets.
- l) Place the  $\frac{3}{4}$ " gasket back into position.

Give significant amount of time to allow the silicone to cure before reinstalling the door onto the firebox.

Figure 23: Exploded View of Door Assembly

Table 4: Parts List for Door Assembly

Item	Code	Description	Qty
1	DR1100	Door frame assembly	1
2	DR_21375	Horizontal metallic bracket	4
2	DR_1325	Vertical metallic bracket	4
3	PYRO_20.25X12	Pyroceram glass	1
4	GSK_19_6	Thin gasket	2
5	GSK_25_6	Thick gasket	1
6	CM0031	Door latch	1
7	POI	Wood pull handle	1

## 6.6 Door Latch Lubrication

Lightly lubricate the hook of door latch (CM0031) on a yearly basis to prevent abrasive wear. Occasionally inspect the bushing of the door latch. If required, adjust the tightness of the latch bolt using a  $\frac{5}{32}$ " hex key.

## 6.7 Paint

Paint touch-ups can be performed on the unit using a high temperature paint (in aerosol spray can format) by Stove Bright®. Refer to your invoice to determine the precise color of your unit. Contact your local hearth shop for further information on purchasing this paint.

NOTE: Apply the paint in a well ventilated area. If applying paint to the door, properly cover/mask the glass of the door using painters tape and cardboard. Wait for paint to dry before operating the unit. Refer to the instructions on the label of the aerosol spray can for proper paint application. **WARNING: Never apply paint to the unit during operation or when it is hot.**

## 6.8 Removal of Firebox

Occasionally, a technician or an inspector may require the firebox to be temporarily removed from the masonry fireplace; therefore, refer to the following instructions for proper removal of the firebox:

- a) Remove and dispose any ashes from within the firebox (see Section 5.1 [Disposal of Ashes](#))
- b) Remove the door of the firebox and place it at a safe location to avoid any damage.
- c) Remove the surround of the unit by unscrewing the 4 screws at each corner of the door holder.
- d) From within the firebox, displace the chimney sweeping cap located in the baffle by lifting and moving it to the side.
- e) Straighten the clips of the adaptor.
- f) Use the handle to push the adaptor upwards and disconnect it from the firebox.
- g) Safely remove the firebox.

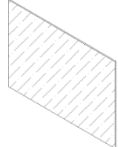

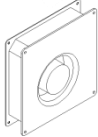

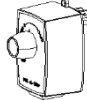

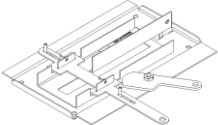

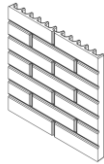

Refer to Section 3 [INSTALLATION INSTRUCTIONS](#) for reinstalling the firebox and the surround.

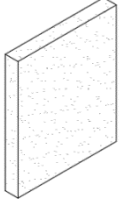

**CAUTION: Never remove the firebox while still in operation (hot).**

## 6.9 Replacement Parts

Refer to the codes from the table below for any replacement parts:

Code	Description	Illustration
POI	Wood pull handle (specify color)	
PYRO_ 24.25_17	Pyroceram III / Keralite 5mm thick glass, 24.25" X 17"	
GSK_19_7.5	Graphite coated square gasket, 0.1875" thick, 7.5' length	
GSK_25_7.5	Graphite coated square gasket, 0.25" thick, 7.5' length	
RG 125-19/06	AC centrifugal compact fan <u>Electrical rating:</u> 115VAC, 60Hz, 19W <u>Certification:</u> VDE, CSA, UL, CE	
60T22	Thermo-disk <u>Electrical rating:</u> 120VAC, 15A <u>Certification:</u> UL/CSA	
B7059	Speed Control <u>Electrical rating:</u> 300W/3.0 Amps, 125VAC – 50/60Hz <u>Certification:</u> UL, ULC	
PA5200	Combustion Air Control (specify color)	
CM0020	Cold Hand Key	
32SFC1175	Cast Iron Panel 15.75" X 15.75" X 1.25"	

32SF1175	Soapstone Panel 15.75" X 15.75" X 1.25"	
----------	--	---

# 7 WARRANTY

SUPREME FIREPLACES INC. warrants that the factory-built fireplaces, fireplace inserts, and stoves will be free from defects in material and workmanship, under normal use and service, for a period of **twenty-five (25) years** from the date of purchase.

This warranty is only intended for the original retail purchaser, given that the product was purchased from SUPREME FIREPLACES INC. or one of its authorized dealers. This warranty is conditional upon correct installation and intended use of the products and does not cover damages caused by misuse. This warranty shall be void if the fireplace and stove is not installed by an authorized qualified technician in accordance with the installation instructions in the manual provided with this product. The installation must meet local and national building codes.

## WARRANTY LIMITATIONS:

Abuse and improper use of the unit may cause irreversible damage and will void the warranty.

- I. During the first two years of the Limited Warranty, SUPREME FIREPLACES INC. will provide replacement parts at no charge and will also pay for reasonable labor costs, except for the parts listed in the EXCLUSIONS portion of this warranty.
- II. During the third through the fifth year of the limited warranty, SUPREME FIREPLACES INC. will provide replacement parts (if available) at no charge, except for the parts mentioned in the EXCLUSIONS portion of this warranty. Supreme Fireplaces Inc. shall not be responsible for any labor costs.
- III. From the sixth through the twenty-fifth year of the limited lifetime warranty, SUPREME FIREPLACES INC. will provide replacement parts (if available) at 50% of the retail price, except for the parts listed in the EXCLUSIONS portion of this warranty. SUPREME FIREPLACES INC. shall not be responsible for any labor costs.

Transportation, packaging, and other related costs or expenses arising from the replacement or repair of defective parts will not be covered by this warranty, nor will SUPREME FIREPLACES INC. assume responsibility for them.

## EXCLUSIONS:

SUPREME FIREPLACES INC. shall not be responsible for any labor costs for the replacement or repair of any electrical components, painted/plated parts, secondary air burning system, and the combustion air control.

The following parts are guaranteed for 1 year: blowers, painted/plated parts, secondary air burning system, soapstone, and door gasket.

The following parts are guaranteed for 90 days: ceramic glass (**thermal breakage ONLY**).

This warranty applies to normal residential use only. Damages caused by acts nature or natural disasters, accidents, over firing, misuse, abuse, negligence, improper installation, alterations or substitutions of components of the fireplace insert, abrasives, chemical cleaners, and negligence are not covered by this warranty. Burning anything other than natural wood will damage your fireplace and void the warranty.

SUPREME FIREPLACES INC. will not be responsible for environmental conditions such as inadequate vents or ventilation, excessive venting configurations or negative air pressures which may or may not be caused by mechanical systems such as exhaust fans, furnaces, clothes dryers, etc.

The manufacturer at its discretion may decide to repair or replace any part or unit after inspection and investigation of the defect. The manufacturer may, at its discretion, fully discharge all obligations with respect to this warranty by refunding the wholesale price of the defective part(s).

The manufacturer shall in no event be responsible for any consequential damages of any nature, which are in excess of the original purchase price of the product. Any complete fireplace, or part thereof, that is replaced or serviced under this warranty will be warranted for a period not exceeding the remaining term of the original warranty.

This **Limited Lifetime Warranty** is effective on all appliances sold and supersedes any and all warranties currently in existence.

Please register your SUPREME product online at <http://www.supremem.com/registration.php> to ensure full warranty coverage. Prior to contacting SUPREME FIREPLACES INC., have the following information available for warranty claim processing:

- Customer information (name, telephone number, and address)
- Proof of purchase
- Model name and serial number (see Section 2.13)
- Detailed description of defected component
- Digital pictures (if necessary)

In the case of a return for repair or replacement, it is the responsibility of the customer to adequately package the component/unit to prevent further damage during transport. Items sent to the SUPREME FIREPLACES INC. without an open warranty claim will be returned to the sender.

Warranty claims should be addressed to:

- FOR USE WITH SOLID WOOD FUEL ONLY.
- A NON-COMBUSTIBLE HEARTH EXTENSION EXCEEDING \*\*\* (\*\*\*) FROM THE DOOR FACE AND OF \*\*\* (\*\*\*) FROM EACH SIDE OF THE DOOR MUST BE INSTALLED.
- TO BE INSTALLED WITH A POSITIVE FLUE CONNECTOR.
- REPLACE GLASS ONLY WITH PYROCERAM GLASS OF 5MM THICK.
- KEEP DOOR CLOSED WHILE IN OPERATION.
- DO NOT USED GRATE OR ELEVATED FIRE / IGNITE WOOD DIRECTLY ON HEARTH.
- INSTAL AND USE IN ACCORDANCE WITH MANUFACTURER'S MANUALS.
- CONTACT LOCAL BUILDING OR FIRE OFFICIALS ABOUT RESTRICTIONS AND INSTALLATION INSPECTION IN YOUR AREA.
- SEE LOCAL BUILDING CODE AND MANUFACTURER'S INSTRUCTIONS FOR PRECAUTIONS REQUIRED FOR PASSING A CHIMNEY THROUGH A COMBUSTIBLE WALL OR CEILING.
- DO NOT OVERFIRE (RED GLOW AT HEATER OR CHIMNEY ADAPTOR).
- INSPECT AND CLEAN CHIMNEY FREQUENTLY UNDER CERTAIN CONDITIONS OF USE, CREOSOTE BUILD-UP MAY OCCUR RAPIDLY.
- CAUTION: MOVING PARTS MAY CAUSE INJURY. DO NOT OPERATE UNIT WITH FACE REMOVED.
- CAUTION: HOT PARTS. DO NOT OPERATE UNIT WITH FACE REMOVED.
- DANGER: RISK OF ELECTRIC SHOCK. DISCONNECT POWER BEFORE SERVICING UNIT.

- INSTALLER ET UTILISER SEULEMENT DANS UN FOYER DE MAÇONNERIE APPROUVE OU UN FOYER PRÉFABRIQUÉ AVEC UNE CONNECTION DIRECT À UNE GAINÉ.
- POUR UTILISATION AVEC BOIS SEULEMENT.
- UN PROLONGEMENT DE L'ÂTRE EXCÉDANT \*\*\* (\*\*\*) DU DEVANT DE LA PORTE ET DE \*\*\* (\*\*\*) DE CHAQUE CÔTÉ DE LA PORTE DOIT ÊTRE INSTALLÉ.
- INSTALLER AVEC UN RACCORD DE TUYAU POSITIF.
- REMPLACER SEULEMENT AVEC UN VERRE PYROCERAM 5MM ÉPAISSEUR.
- GARDER LA PORTE FERMÉE PENDANT LE FONCTIONNEMENT.
- NE PAS SURÉLEVER LE FEU EN PLAÇANT UN CHENET/GRILLAGE DANS L'APAREIL.
- INSTALLER ET UTILISER CONFORMÉMENT AU MANUEL D'UTILISATION AU FABRICANT.
- CONTACTER LES AUTORITÉS DE VOTRE LOCALITÉ AYANT JURIDICTION CONVERNANT LES RESTRICTIONS ET INSPECTIONS D'INSTALLATION.
- VOIR LES CODES LOCAUX ET LE MANUEL D'INSTALLATION DU MANUFACTURIER POUR LE PASSAGE DE LA CHEMINÉE À TRAVERS UN MUR OU UN PLAFOND COMBUSTIBLE.
- NE PAS RACCORDER CET APPAREIL À UNE CHEMINÉE DESSERVANT UN AUTRE APPAREIL.
- NE PAS SURCHAUFFER (APPAREIL OU ADAPATEUR ROUGIT).
- INSPECTER ET NETTOYER LA CHEMINÉE FRÉQUEMENT. DANS CERTAINES CONDITIONS, L'ACCUMULATION DE CRÉOSOTE PEUT ÊTRE RAPIDE.
- ATTENTION: PIÈCES MOUVANTES PEUVENT CAUSER DES BLESSURES. NE PAS OPÉRER L'UNITÉ AVEC FACADE ENLEVÉ.
- ATTENTION: PARTIES CHAUDES. NE PAS OPÉRER L'UNITÉ AVEC LA FACADE ENLEVÉE.
- ATTENTION: RISQUE DE CHOC ÉLECTRIQUE. DÉBRANCHER L'APPAREIL AVANT DE FAIRE L'ENTRETIEN.

**CAUTION** Hot while in operation. Do not touch. Keep children, clothing, and furniture away. Contact may cause skin burns. See nameplate and instructions.

Chaud pendant fonctionnement. Ne pas toucher. Garder les enfants, les vêtements et les meubles hors de portée. Risque de brûlures au contact. Voir la fiche signalétique et instructions.

## APPENDIX 12: Volume calculations

## APPENDIX 13: Operating instruction

# 17 Control Settings

## 17.1 Kindling

1. Place the first row of kindling wood (approx. 12" long) in the north-south direction.
2. Place the second row of kindling wood (approx. 15") in the east-west direction.
3. Continue stacking the kindling wood by alternating the placing direction until a weight between 9 to 10 lbs of kindling has been obtain.
4. Allow a clearance of 2" between the top row of the kindling wood and the baffle.
5. Position the primary air control in the ignition setting (left lever pushed back) and the burn rate adjuster at the maximum position (refer to Figure 17-1).
6. With a torch, light the top row of the kindling wood for 1 minute and close the door of the unit.

Figure 17-1: Primary Air Control - Ignition Setting

## 17.2 High Fire Test Run

1. Insert 28 lbs to 30 lbs of wood (5 pieces) once the kindling has reached the lower portion of the loading bracket:
  - a. Place the first row of wood (2 pieces) in the north-south direction on the center of the hearth, with 6" space between the logs.
  - b. Place the second row of wood (2 pieces), in the east-west direction with a 4" to 5" space between the logs.
  - c. Place the fifth log on top of the first and second row, in a diagonal direction.
2. Keep the door slightly open until proper ignition has been completed (approximately 3 minutes).
3. Once the door is closed, push back the left lever of the primary air control.
4. Assure that the right lever is set to the maximum position (refer to Figure 17-2).

Figure 17-2: Primary Air Control - High Burn Rate

## 17.3 Low Fire Test Run

1. Insert 30 lbs to 32 lbs of wood (5 pieces) once the kindling has reached the lower portion of the loading bracket:
  - a. Place the first row of wood (2 pieces) in the north-south direction on the center of the hearth, with 6" space between the logs.
  - b. Place the second row of wood (2 pieces), in the east-west direction with a 4" to 5" space between the logs.
  - c. Place the fifth log on top of the first and second row, in a diagonal direction.
2. Keep the door slightly open until proper ignition has been completed (approximately 3 minutes).
3. Once the door is closed, push back the left lever of the primary air control.
4. Assure that the right lever is set to the minimum position.

Figure 17-3: Primary Air Control - Low Burn Rate

## 17.4 Medium Fire Test Run

1. Insert 30 lbs to 32 lbs of wood (5 pieces) once the kindling has reached the lower portion of the loading bracket:
  - a. Place the first row of wood (2 pieces) in the north-south direction on the center of the hearth, with 6" space between the logs.
  - b. Place the second row of wood (2 pieces), in the east-west direction with a 4" to 5" space between the logs.
  - c. Place the fifth log on top of the first and second row, in a diagonal direction.
2. Keep the door slightly open until proper ignition has been completed (approximately 3 minutes).
3. Once the door is closed, push back the left lever of the primary air control.
4. Assure that the right lever is set to the medium position (refer to Figure 17-4).

**Remarks:**

**COMPLIANCE STATEMENTS AND ACKNOWLEDGEMENTS – SECTIONS 60.533(B) AND 60.5475(B)**

**INSTRUCTIONS: PLEASE READ THE BELOW STATEMENTS AND AFFIRMATIONS AND ADDRESS ACCORDINGLY.**

**FOR EMISSIONS DATA SUMMARY TABLES SEE ATTACHMENTS**

**1. Engineering Drawings Statement**

Foyers Supreme Incorporated has provided as CBI information along with the report engineering drawings and specifications of components that may affect emissions (including specifications for each component listed in paragraphs (k)(2), (3) and (4) of 60.533(b) and 60.5475(b). All K list component drawings contain full measurements and dimensions as required. All tolerances of components identified in paragraph (k)(2) of 60.533(b) and 60.5475(b) are in compliance with the allowable tolerances as specified per the CFR. The drawings and/or manual identify how the emission critical parts, such as baffle and air control can be readily inspected and replaced.

**2. Firebox Statement Requirement**

Foyers Supreme Incorporated will manufacture the firebox composed with the same materials from the material used for the firebox or firebox component in the wood heater on which certification testing was performed.

**3. CBI**

Foyers Supreme Incorporated has clearly labeled all confidential business information (CBI). Both CBI and Non-CBI reports have been provided electronically.

**4. Valid Certification Statement**

Foyers Supreme Incorporated has submitted a test report that contains the information required for report submittal per the CFR. This includes a summary table that clearly presents the individual and overall emission rates, efficiencies and heat outputs.

**5. Warranties**

Foyers Supreme Incorporated has provided a copy of the warranties for the model line, which includes a statement that the warranties are void if the unit is used to burn materials for which the unit is not certified by the EPA and void if not operated according to the owner's manual.

**6. Q/A Statement**

Foyers Supreme Incorporated will conduct a quality assurance program for the model line that satisfies the requirements of paragraph (m) of the CFR.

**7. Laboratory Sealing of Unit**

Services Polytests Inc. (laboratory) has sealed the tested unit (Flair 34, Lumis 32 – Cast Iron, Lumis 32 - Soapstone, Regal 32 – Cast Iron, Regal 32 - Soapstone) after completion of the test series and the unit will be stored at Foyers Supreme Incorporated facility for a minimum of 5 years from the completion of the certification test.

**8. Statements that the wood heaters manufactured under this certificate will be—**

- (i) The unit tested (Flair 34, Lumis 32 – Cast Iron, Lumis 32 - Soapstone, Regal 32 – Cast Iron, Regal 32 - Soapstone) is similar in all material respects that would affect emissions as defined in §60.531 to the wood heater submitted for certification testing, and labeled as prescribed in §60.536 and 60.5478.
- (ii) Foyer Supremes Incorporated has provided an owner's manual that meets the requirements in § 60.536 and 60.5478. In addition, a copy of the owner's manual will be submitted to the Administrator and be available to the public on the Foyers Supreme Incorporated's web site.

**9. Third Party Certification Statement**

Foyers Supreme Incorporated has contracted an approved laboratory (Services Polytests Inc.) and an approved third-party certifier (PFS-TECO) whom satisfies the requirements of paragraph (f) of the CFR.

**10. Approved laboratory/third party Statement**

The test laboratory (Services Polytests Inc.) and approved third-party certifier (PFS-TECO) are authorized to submit information on behalf of the Foyers Supreme Incorporated, including any claimed to be CBI.

**11. Manufacturer's Website Certification Test Reports Availability Statement**

Foyers Supreme Incorporated agrees to place a copy of the certification test report and summary on its web site available to the public within 30 days after the Administrator issues a certificate of compliance.

**12. Transferability Acknowledgement Statement**

Foyers Supreme Incorporated acknowledges that the certificate of compliance cannot be transferred to another manufacturer or model line without written approval by the Administrator.

**13. Statement about Selling Wood Heaters without an EPA Certificate**

Foyers Supreme Incorporated acknowledges that it is unlawful to sell, distribute or offer to sell or distribute an affected wood heater without a valid certificate of compliance.

**Print Name and Title:**

**Alexander Marcakis, Engineering Department**

**Date:**

**15<sup>th</sup> of July, 2019**

Signature of responsible representative of the manufacturer certifying the accuracy of the above statements:

The authorized person whose signature is above certifies that the appliance (Flair 34, Lumis 32 – Cast Iron, Lumis 32 - Soapstone, Regal 32 – Cast Iron, Regal 32 - Soapstone) as tested is in compliance with all certification requirements of the 2015 NSPS. Foyers Supreme Incorporated (manufacturer) also acknowledges that we remain responsible for compliance regardless of any error by the test laboratory (Services Polytests Inc.) or third-party certifier (PFS-TECO).

**Attachments**

**Instructions:** Please complete the section applicable to your certification request. You may substitute your own data tables in lieu of the ones shown below provided that all the information is captured.

**WOOD BURNING HEATERS**

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY  
RESEARCH TRIANGLE PARK, NC 27711

FEB 28 2018

Mr. Justin White  
Hearthstone QHPP, Inc.  
#17 Stafford Ave.  
Morrisville, VT 05661

OFFICE OF  
AIR QUALITY PLANNING  
AND STANDARDS

Dear Mr. White,

I am writing in response to your letter dated January 12, 2018, regarding wood heaters manufactured by Hearthstone QHPP, Inc. (Hearthstone). This response, dated February 28, 2018, supercedes our previous response (dated February 26, 2018) to correct an inaccuracy regarding required changes to ASTM E3053-17.

You are requesting to use an alternative test method, using cord wood, as referenced in section 60.532(c) of 40 CFR part 60, Subpart AAA, Standards of Performance for New Residential Wood Heaters (Subpart AAA) to meet the 2020 cord wood alternative compliance option. The 2020 cord wood alternative compliance option states that each affected wood heater manufactured or sold at retail for use in the United States on or after May 15, 2020, must not discharge into the atmosphere any gases that contain particulate matter in excess of 2.5 g/hr. Compliance must be determined by a cord wood test method approved by the Administrator along with the procedures in 40 CFR 60.534. You have requested approval to use the procedures and specifications found in ASTM Method E3053-17, a cord wood test method titled, "Standard Test Method for Determining Particulate Matter Emissions from Wood Heaters using Cordwood Test Fuel," in conjunction with ASTM E2515-11 and Canadian Standards Administration (CSA) Method CSA-B415.1-10, which are specified in 40 CFR 60.534.

We understand that Hearthstone is also requesting that the alternative method proposed above be approved to apply broadly to all wood heaters manufactured by Hearthstone meeting the requirements of Subpart AAA, from the approval date of this request until such time that Subpart AAA is revised or replaced to require a different cord wood certification method, providing all requirements of section 60.533 of Subpart AAA are met.

With the caveats set forth below, we approve your alternative test method request for certifying wood heaters using ASTM E3053-17 in conjunction with section 60.534 of Subpart AAA to meet the 2020 cord wood compliance option until such time that Subpart AAA is revised or replaced to require a different cord wood certification method. We also approve application of this alternative method to all wood heaters manufactured by Hearthstone meeting the requirements of Subpart AAA.

As required in Subpart AAA, section 60.354(d), you or your approved test laboratory must also measure the first hour of particulate matter emissions for each test run using a separate filter in one of the two parallel sampling trains. These results must be reported separately and also included in the total particulate matter emissions per run. Also, as required by Subpart AAA, section 60.534(e), you must have your approved laboratory measure the efficiency, heat output, and carbon monoxide emissions of the tested wood heater using CSA-B415.1-10. For measurement of particulate matter emission concentrations, ASTM 2515-11 must be used.

The following change to ASTM E3053-17 must be followed:

1. Coal bed conditions prior to loading test fuel. The coal bed shall be a level plane without valleys or ridges for all test runs in the high, low, and medium burn rate categories.

The following changes to ASTM E2515-11 must be followed:

1. The filter temperature must be maintained between 80 and 90 degrees F during testing.
2. Filters must be weighed in pairs to reduce weighing error propagation; see ASTM 2515-11, Section 10.2.1 Analytical Procedure.
3. Sample filters must be Pall TX-40 or equivalent Teflon-coated glass fiber, and of 47 mm, 90 mm, 100 mm, or 110 mm in diameter.
4. Only one point is allowed outside the +/- 10 percent proportionality range per test run.

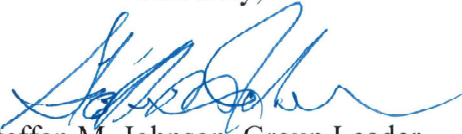

A copy of this letter must be included in each certification test report where this alternative test method is utilized.

It is reasonable that this alternative test method approval be broadly applicable to all wood heaters subject to the requirements of 40 CFR part 60, Subpart AAA. For this reason, we will post this letter as ALT-125 on our website at <http://www3.epa.gov/ttn/emc/approalt.html> for use by other interested parties. As noted earlier in this letter, this alternative method approval is valid until such time that Subpart AAA is revised or replaced to require a different cord wood certification method, and at such time, this alternative will be reconsidered and possibly withdrawn.

If you have additional questions regarding this approval, please contact Michael Toney of my staff at 919-541-5247 or [toney.mike@epa.gov](mailto:toney.mike@epa.gov).

Sincerely,

Steffan M. Johnson, Group Leader  
Measurement Technology Group
